INTERNATIONAL THEMATIC CONFERENCE
LIFE WOLFALPS EU 2022

Is the grass always greener elsewhere?

**SHARING MANAGEMENT STRATEGIES ON COEXISTENCE
BETWEEN WOLVES AND HUMAN ACTIVITIES IN EUROPE**

The natural return of the wolf throughout the Alps over the past 30 years poses numerous challenges to coexistence with human activities. Different approaches are used to tackle these challenges. Yet because management strategies are implemented at the national or regional level, their equivalent in neighbouring countries is often misunderstood and sometimes idealized: the grass hence always looks greener elsewhere. Speakers at this international conference will detail the management strategy implemented in their respective geographical areas (France, Italy, Austria, Slovenia, Spain, Slovakia and others) and exchange on the challenges and practices used to try to reconcile human activities and the presence of the predator.
